

## Earth Day Science Symposium: Rainforests

### GUIDING QUESTIONS FOR RAINFOREST CARDS

Below are guiding questions for rainforest cards (note that we have supplied two versions, one for the 19 animal cards, one for the 9 plant cards). Use the questions to guide students as they read cards and report information to the class.

#### **Guiding Questions for Animal Cards**

- Where in the world does your animal live?
- In what layer(s) of the rainforest can your animal be found?
- Is your animal endangered? If so, what is its status?
- Does your animal have symbiotic connections to other animals or plants? If so, describe the connections.
- What plants and animals is your animal connected with through the food chain? What does it eat, or what eats it?

#### **Guiding Questions for Plant Cards**

- Where in the world does your plant grow?
- In what layer(s) of the rainforest can your plant be found?
- Is your plant endangered? If so, what is its status?
- Does your plant have symbiotic connections to other plants or animals? If so, describe the connections.
- What animals is your plant connected with through the food chain? What eats it?
